

Vertical multi-stage close coupled pumps

MXSU

OPERATING INSTRUCTIONS

1. Operating conditions

Standard construction

- For clean water with a maximum temperature of 35 °C and maximum sand content of 60 g/m³.
- For clean liquids: non-explosive and non-flammable, non-hazardous for health or the environment, non-aggressive for pump materials, not containing abrasives, solid or fibrous particles.
- Maximum permissible pressure in the pump casing: 10 bar.
- Maximum starts/hour: 30 at regular intervals. Sound pressure: 60 dB (A).

The motor is cooled by the pumped water passing between the motor jacket and the external jacket.

The pump is suited for installation in confined space with minimum ventilation, in areas exposed to the sun and weather, those subject to risk of temporary flooding or exposure to water jetting.

2. Installation

Never use the electric power cable to suspend the pump.

The pump must be installed in the vertical position with the delivery connection facing upwards. See installation examples, fig. 1.

Place the pump as close as possible to the suction source.

Make sure prolonged accidental leakage of liquid does not cause damage to persons or property.

Leakage may develop as a result of overpressure, water hammer, erroneous operations (such as failing to close a plug or valve) or other functional disorders. Allow for the possibility of channelling away any leaked fluid or for an automatic drainage system against flooding. Put in a safe place any property which may be damaged by the water.

Provide for the possibility of draining the pump without having to drain the entire system.

9. Supports and clamps for pipelines
10. Vibration dampers

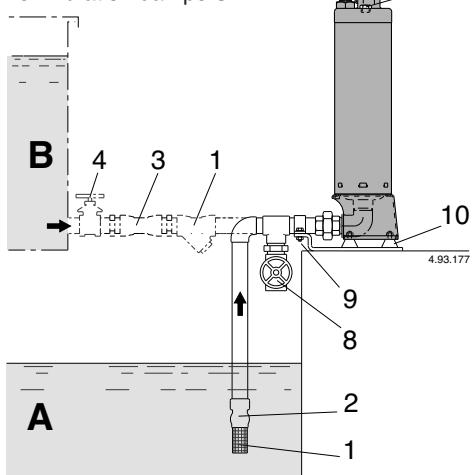

Fig. 1 Systems diagram

A = Suction lift operation

B = Positive suction head operation

3. Pipes

Ensure the inside of pipes are clean and unobstructed before connection.

ATTENTION: The pipes connected to the pump should be secured to rest clamps so that they do not transmit stress, strain or vibrations to the pump.

Into stable and rigid pipelines the pump can be supported directly through the pipes (fig. 2).

Tighten the pipes or union coupling to the extent sufficient to ensure a tight seal.

Excessive torque may cause damage to the pump. When the pipe or union coupling is mounted, keep the pump connection blocked with a second wrench, making sure the connection is not deformed by excessive tightening.

The pipe diameters must not be smaller than the pump connections.

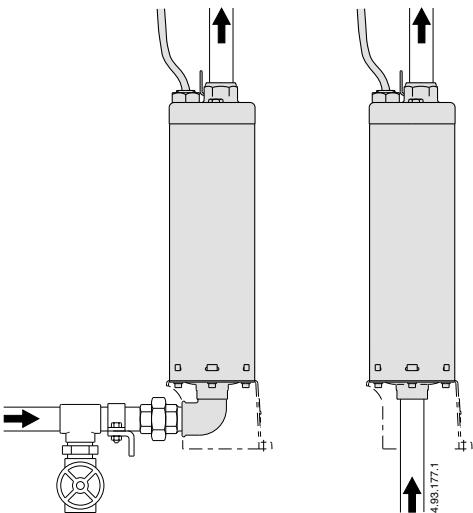

Fig. 2 Pump supported by the pipes

3.1. Suction pipe

If the suction pipe is longer than 10 m, use an internal pipe diameter larger than the pump suction connection.

The suction pipe must be perfectly airtight and be led upwards in order to avoid air pockets.

With a **pump located above the water level** (suction lift operation, fig. 1A) fit a foot valve with strainer which must always remain immersed.

With the **liquid level on the suction side above the pump** (inflow under positive suction head, fig. 1B) fit an inlet gate valve.

For suction from a storage tank fit an anti-backflow valve.

Follow local specifications if increasing network pressure.

Install a strainer on the suction side of the pump to prevent foreign particles from entering the pump.

3.2. Delivery pipe

Fit a gate valve in the delivery pipe to adjust delivery, head and absorbed power.

Install a pressure gauge between the pump and the gate valve.

ATTENTION: install a check valve between the pump and the gate valve in order to avoid reverse flow after switching off the pump unit and to protect the pump from water hammers.

With servooperated shut-off devices, provide an air vessel or another protection device against surge of pressure in the case of sudden changes of flow rate.

4. Electrical connection

Electrical connection must be carried out only by a qualified electrician in accordance with local regulations.
Follow all safety standards.

The unit must be properly earthed (grounded).

Make sure the frequency and mains voltage correspond with the name plate data.

The motors with supply current directly switched by thermally sensitive switches can start automatically.

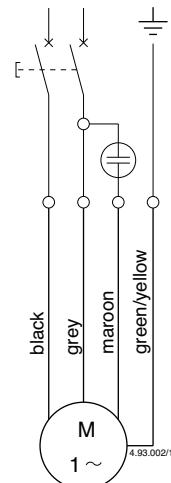

Install a **device for disconnection from the mains** (switch) with a contact separation of at least 3 mm on all poles.

4.1. Single-phase pumps MXSUM

Supplied with incorporated thermal protector.

The motor will stop if overheating is detected. When the windings cool down (after 2 to 4 minutes), the thermal protector enables re-starting.

Control box with capacitor supplied on request.

Electrical diagram

4.2. Three-phase pumps MXSU

Install in the control box an overload-protective device in accordance with the name-plate current.

5. Starting

ATTENTION: never run the pump dry - not even for a short trial run.

Start the pump after filling it completely with liquid.

When the pump is located above the water level (suction lift operation, fig. 1A) or with a positive suction head which is too low (less than 1 m) to open the non-return valve, fill the suction pipe and the pump through the priming hole (ref. 6, fig. 1).

When the liquid level on the suction side is above the pump (inflow under positive suction head, fig. 1B), fill the pump by opening the suction gate valve slowly and completely, keeping the delivery gate valve and the air vent (ref. 6, fig. 1) open to release the air. Close the plug when the water reaches the air vent hole.

With a three-phase power supply make sure the direction of rotation is correct.

For this purpose, with the gate valve at any aperture position, check the pressure (with the pressure gauge), or flow rate (sight check) after starting. Switch off power, invert the connections of two phases on the control panel, re-start and check the pressure or flow rate capacity again.

The correct direction of rotation will provide a considerably greater and easily distinguishable pressure and delivery capacity.

Check that the pump works within its field of performance and that the absorbed current shown on the name-plate is not exceeded. Otherwise adjust the delivery gate valve or the setting of any pressure switches.

If a priming loss occurs (interruption of delivery flow) or if a pressure oscillation is indicated by the pressure gauge, make sure all the suction pipe couplings are perfectly sealed.

Never run the pump for more than five minutes with a closed gate valve.

Prolonged operation without a change of water in the pump causes dangerous increases of temperature and pressure.

6. Maintenance

Under normal operating conditions the pump will not require maintenance.

ATTENTION: if the pump is temporarily used with dirty liquids or water containing chloride, flush the pump briefly with clean water immediately after use to remove any deposit.

If the pump has not been used for a long time and does not start or gives no water (but electrical connections are in order), the pump must be removed and checked to see if it is choked by any foreign matter or blocked by sediment, deposits or any other cause.

When the pump remains inactive it must be emptied completely if there is a risk of freezing.

Disconnect electrical power before any servicing operation and make sure the pump cannot be accidentally switched on.

7. Dismantling

7.1. Checking rotation of the shaft

Close the suction and delivery gate valves and drain the pump casing before dismantling the pump.

For dismantling and re-assembly see construction in the cross section drawing.

While the pump is positioned horizontally, remove the screws (14.24), the square nuts (14.28) the base (61.00), the suction casing (16.00) with the elbow (16.30). Hold the first stage casing (25.01) tightly with one hand so that it does not rotate and, with a wrench on the nut (28.04), turn the shaft in the anti-clockwise direction.

If the shaft is blocked and cannot be freed, dismantling should continue until the cause has been found and removed.

7.2. Inspection of the hydraulic parts

The O-ring (14.20) and then the complete motor assembly with all internal pump parts are removed from the external jacket (14.02).

The first impeller can be inspected by removing the first stage casing (25.01).

Once the nuts (28.04) and washer (28.08) are removed the spacer sleeves (64.15), impellers (28.00) and the other stage casings (25.02 and 25.05) can be dismantled one after the other.

Others parts should not be dismantled.

The motor and pump functions can be impaired by erroneous procedure or tampering with internal parts.

7.3. Oil chamber

If the oil chamber has to be inspected, follow these instructions:

CAUTION: there may be slight pressure in the oil chamber.

Care must be taken to avoid a sudden spurting of oil. Wait until the oil chamber cover (34.03) has cooled down.

Before removing the lower mechanical seal (36.00), loosen the screws (70.18) and raise the cover (34.03), applying force simultaneously on two opposite points of the cover rim, to let off pressure from the oil chamber. Carry out this operation while holding the motor in the upturned vertical position.

When refilling the chamber use only white oil suitable for food machinery and pharmaceutic use (quantity = 35 g).

First, mount the fixed parts of the seal (36.00) on the oil chamber cover (34.00) and then the oil chamber cover (34.03) on the motor cover (70.00) with the O-ring (70.09).

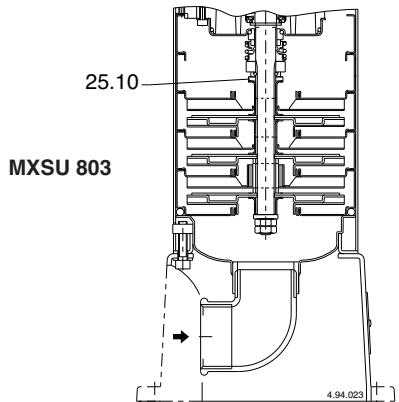

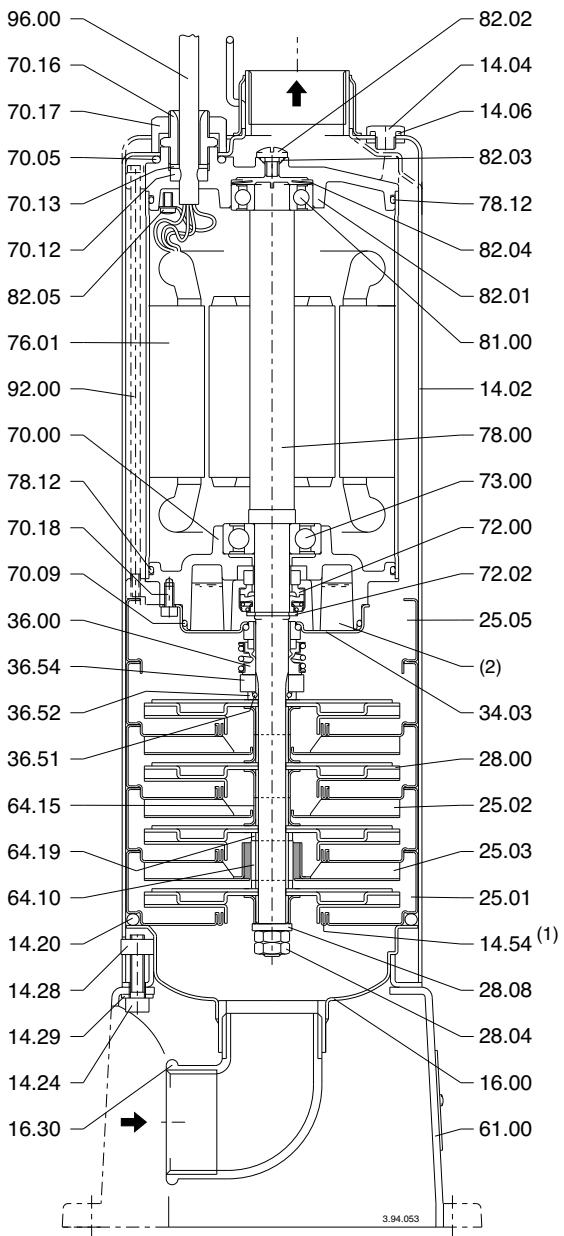

8. Spare parts

When ordering spare parts, please quote their designation, position number in the cross section drawing and rated data from the pump name plate (typ, date and serial number).

Changes reserved.

I DICHIARAZIONE DI CONFORMITÀ

Noi CALPEDA S.p.A. dichiariamo sotto la nostra esclusiva responsabilità che le Pompe MXSU, MXSUM, tipo e numero di serie riportati in targa, sono conformi a quanto prescritto dalle Direttive 2004/108/CE, 2006/42/CE, 2006/95/CE e dalle relative norme armonizzate.

GB DECLARATION OF CONFORMITY

We CALPEDA S.p.A. declare that our Pumps MXSU, MXSUM, with pump type and serial number as shown on the name plate, are constructed in accordance with Directives 2004/108/EC, 2006/42/EC, 2006/95/EC and assume full responsibility for conformity with the standards laid down therein.

D KONFORMITÄTSERKLÄRUNG

Wir, das Unternehmen CALPEDA S.p.A., erklären hiermit verbindlich, daß die Pumpen MXSU, MXSUM, Typbezeichnung und Fabrik-Nr. nach Leistungsschild den EG-Vorschriften 2004/108/EG, 2006/42/EG, 2006/95/EG entsprechen.

F DECLARATION DE CONFORMITE

Nous, CALPEDA S.p.A., déclarons que les pompes MXSU, MXSUM, modèle et numéro de série marqués sur la plaque signalétique sont conformes aux Directives 2004/108/CE, 2006/42/CE, 2006/95/CE.

E DECLARACION DE CONFORMIDAD

En CALPEDA S.p.A. declaramos bajo nuestra exclusiva responsabilidad que las Bombas MXSU, MXSUM, modelo y numero de serie marcados en la placa de características son conformes a las disposiciones de las Directivas 2004/108/CE, 2006/42/CE, 2006/95/CE.

DK OVERENSSTEMMELSESERKLÆRING

Vi CALPEDA S.p.A. erklærer hermed at vore pumper MXSU, MXSUM, pumpe type og serie nummer vist på typeskiltet er fremstillet i overensstemmelse med bestemmelserne i Direktiv 2004/108/EC, 2006/42/EC, 2006/95/EC og er i overensstemmelse med de heri indeholdte standarder.

P DECLARAÇÃO DE CONFORMIDADE

Nós, CALPEDA S.p.A., declaramos que as nossas Bombas MXSU, MXSUM, modelo e número de série indicado na placa identificadora são construídas de acordo com as Directivas 2004/108/CE, 2006/42/CE, 2006/95/CE e somos inteiramente responsáveis pela conformidade das respectivas normas.

NL CONFORMITEITSVERKLARING

Wij CALPEDA S.p.A. verklaaren hiermede dat onze pompen MXSU, MXSUM, pomptype en serienummer zoals vermeld op de typeplaat aan de EG-voorschriften 2004/108/EU, 2006/42/EU, 2006/95/EU voldoen.

SF VAKUUTUS

Me CALPEDA S.p.A. vakuutamme että pumppumme MXSU, MXSUM, malli ja valmistusnumero tyypikilvistä, ovat valmistettu 2004/108/EU, 2006/42/EU, 2006/95/EU direktiivien mukaisesti ja CALPEDA ottaa täyden vastuu siitä, että tuotteet vastaavat näitä standardeja.

S EU NORM CERTIKAT

CALPEDA S.p.A. intygar att pumpar MXSU, MXSUM, pumptyp och serienummer, visade på namnplåten är konstruerade enligt direktiv 2004/108/EC, 2006/42/EC, 2006/95/EC. Calpeda åtar sig fullt ansvar för överensstämmelse med standard som fastställts i denna avtal.

GR ΔΗΛΩΣΗ ΣΥΜΦΩΝΙΑΣ

Εμείς ως CALPEDA S.p.A. δηλώνουμε ότι οι αντίτις μας αυτές MXSU, MXSUM, με τύπο και αριθμό σειράς κατασκευής όπου αναγράφετε στην πινακίδα της αντίτις, κατασκευάζονται σύμφωνα με τις οδηγίες 2004/108/EOK, 2006/42/EOK, 2006/95/EOK, και αναλαμβάνουμε πλήρη υπεύθυνότητα για αιματωνία (αιματόφρωση), με τα στάνταρ των προδιαγραφών αυτών.

TR UYGUNLUK BEYANI

Bizler CALPEDA S.p.A. firması olarak MXSU, MXSUM, Pompalarımızın, 2004/108/EC, 2006/42/EC, 2006/95/EC, direktiflerine uygun olarak imal edildiklerini beyan eder ve bu standartlara uygunluğuna dair tüm sorumluluğu üstleniriz.

RU Декларация соответствия

Компания "Calpeda S.p.A." заявляет с полной ответственностью, что насосы серии MXSU, MXSUM, тип и серийный номер которых указывается на заводской табличке соответствуют требованиям нормативов 2004/108/CE, 2006/42/CE, 2006/95/CE.

Il Presidente
